

First of all, I pay for XM service because of the programming they offer. It is my 1st amendment right as is theirs to give me information that I need to navigate through weather and traffic. I am a truck-driver that runs coast to coast. REJECT THE NAB'S PETITION 04-160 as it is unconstitutional. Local radio stations don't give the quality that XM does as far as weather and traffic, even though they could, they don't. I am sure it has to do with revenue from commercials, where XM is limited to few commercials because I pay for their service. I personally don't see where content is any of FCC's business, and wish the FCC would do a better job at what they were formed to do. Which is NOT sensorship!
